**XARELTO® (zah-REL-toe)**
*(rivaroxaban)*

**What is the most important information I should know about XARELTO?**

**XARELTO** may cause serious side effects, including:

- **Increased risk of blood clots if you stop taking XARELTO.** People with atrial fibrillation (a type of irregular heart beat) that is not caused by a heart valve problem (non-valvular) are at an increased risk of forming a blood clot in the heart, which can travel to the brain, causing a stroke, or to other parts of the body. XARELTO lowers your chance of having a stroke by helping to prevent clots from forming. If you stop taking XARELTO, you may have increased risk of forming a clot in your blood.

  **Do not stop taking XARELTO without talking to the doctor who prescribes it for you.** Stopping XARELTO increases your risk of having a stroke. If you have to stop taking XARELTO, your doctor may prescribe another blood thinner medicine to prevent a blood clot from forming.

- **Increased risk of bleeding.** XARELTO can cause bleeding which can be serious and may lead to death. This is because XARELTO is a blood thinner medicine (anticoagulant) that lowers blood clotting. During treatment with XARELTO you are likely to bruise more easily, and it may take longer for bleeding to stop. You may have a higher risk of bleeding if you take XARELTO and have certain other medical problems.

  **You may have a higher risk of bleeding if you take XARELTO and take other medicines that increase your risk of bleeding, including:**
  - aspirin or aspirin containing products
  - long-term (chronic) use of non-steroidal anti-inflammatory drugs (NSAIDs)
  - warfarin sodium (Coumadin®, Jantoven®)
  - any medicine that contains heparin
  - clopidogrel (Plavix®)
  - selective serotonin reuptake inhibitors (SSRIs) or serotonin norepinephrine reuptake inhibitors (SNRIs)
  - other medicines to prevent or treat blood clots

  **Tell your doctor** if you take any of these medicines. Ask your doctor or pharmacist if you are not sure if your medicine is one listed above.

- **Spinal or epidural blood clots (hematoma).** People who take a blood thinner medicine (anticoagulant) like XARELTO, and have medicine injected into their spinal and epidural area, or have a spinal puncture have a risk of forming a blood clot that can cause long-term or permanent loss of the ability to move (paralysis). Your risk of developing a spinal or epidural blood clot is higher if:
  - a thin tube called an epidural catheter is placed in your back to give you certain medicine
  - you take NSAIDs or a medicine to prevent blood from clotting
  - you have a history of difficult or repeated epidural or spinal punctures
  - you have a history of problems with your spine or have had surgery on your spine

  If you take XARELTO and receive spinal anesthesia or have a spinal puncture, your doctor should watch you closely for symptoms of spinal or epidural blood clots.

  **Tell your doctor** right away if you have:
  - back pain
  - tingling
  - numbness
  - muscle weakness (especially in your legs and feet)
  - loss of control of the bowels or bladder (incontinence)

**XARELTO** is not for use in people with artificial heart valves.

**XARELTO** is not for use in people with antiphospholipid syndrome (APS), especially with positive triple antibody testing.
What is XARELTO?
XARELTO is a prescription medicine used to:
• reduce the risk of stroke and blood clots in adults who have a medical condition called atrial fibrillation that is not caused by a
  heart valve problem. With atrial fibrillation, part of the heart does not beat the way it should. This can lead to the formation of blood
  clots, which can travel to the brain, causing a stroke, or to other parts of the body.
• treat blood clots in the veins of your legs (deep vein thrombosis or DVT) or lungs (pulmonary embolism or PE)
• reduce the risk of blood clots from happening again in adults who continue to be at risk for DVT or PE after receiving treatment for
  blood clots for at least 6 months.
• help prevent a blood clot in the legs and lungs of adults who have just had hip or knee replacement surgery.
• help prevent blood clots in certain adults hospitalized for an acute illness and after discharge who are at risk of getting blood clots
  because of the loss of or decreased ability to move around (mobility) and other risks for getting blood clots and who do not have
  a high risk of bleeding.
XARELTO is used with low dose aspirin to:
• reduce the risk of serious heart problems, heart attack and stroke in adults with coronary artery disease (a condition where the
  blood supply to the heart is reduced or blocked).
• reduce the risk of a sudden decrease in blood flow to the legs, major amputation, serious heart problems or stroke in adults with
  peripheral artery disease (a condition where the blood flow to the legs is reduced) and includes adults who have recently had a
  procedure to improve blood flow to the legs.
XARELTO is used in children to:
• treat blood clots or reduce the risk of blood clots from happening again in children from birth to less than 18 years, after receiving
  at least 5 days of treatment with injectable or intravenous medicines used to treat blood clots.
• help prevent blood clots in children 2 years and older with congenital heart disease after the Fontan procedure.
XARELTO was not studied and is not recommended in children less than 6 months of age who:
• were less than 37 weeks of growth (gestation) at birth
• had less than 10 days of oral feeding, or
• had a body weight of less than 5.7 pounds (2.6 kg)

Do not take XARELTO if you or your child:
• currently have certain types of abnormal bleeding. Talk to your doctor before taking XARELTO if you currently have unusual
  bleeding.
• are allergic to rivaroxaban or any of the ingredients in XARELTO. See the end of this Medication Guide for a complete list of
  ingredients in XARELTO.
Before taking XARELTO, tell your doctor about all of your medical conditions, including if you or your child:

- have or ever had bleeding problems
- have liver or kidney problems
- have antiphospholipid syndrome (APS)
- are pregnant or plan to become pregnant. It is not known if XARELTO will harm your unborn baby.
  - Tell your doctor right away if you become pregnant during treatment with XARELTO. Taking XARELTO while you are pregnant may increase the risk of bleeding in you or in your unborn baby.
  - Females who are able to become pregnant: Talk with your doctor about pregnancy planning during treatment with XARELTO. Talk with your doctor about your risk for severe uterine bleeding if you are treated with blood thinner medicines, including XARELTO.
  - If you take XARELTO during pregnancy tell your doctor right away if you have any signs or symptoms of bleeding or blood loss. See “What is the most important information I should know about XARELTO?” for signs and symptoms of bleeding.
- are breastfeeding or plan to breastfeed. XARELTO can pass into your breast milk. Talk to your doctor about the best way to feed your baby during treatment with XARELTO.

Tell all of your doctors and dentists that you or your child are taking XARELTO. They should talk to the doctor who prescribed XARELTO for you before you have any surgery, medical or dental procedure.

Tell your doctor about all the medicines you or your child take, including prescription and over-the-counter medicines, vitamins, and herbal supplements.

Some of your other medicines may affect the way XARELTO works, causing side effects. Certain medicines may increase your risk of bleeding. See “What is the most important information I should know about XARELTO?”

Especially tell your doctor if you or your child take:

- ketoconazole
- erythromycin
- phenytoin
- St. John’s wort
- ritonavir
- carbamazepine
- rifampin
How should I take XARELTO?

- Take XARELTO exactly as prescribed by your doctor.
- Do not change your dose or stop taking XARELTO unless your doctor tells you to. Your doctor may change your dose if needed.
- Your doctor will decide how long you should take XARELTO.
- XARELTO may need to be stopped for one or more days before any surgery or medical or dental procedure. Your doctor will tell you when to stop taking XARELTO and when to start taking XARELTO again after your surgery or procedure.
- If you need to stop taking XARELTO for any reason, talk to the doctor who prescribed XARELTO to you to find out when you should stop taking it. Do not stop taking XARELTO without first talking to the doctor who prescribes it to you.
- If you have difficulty swallowing XARELTO tablets whole, talk to your doctor about other ways to take XARELTO.
- Do not run out of XARELTO. Refill your prescription of XARELTO before you run out. When leaving the hospital following a hip or knee replacement, be sure that you will have XARELTO available to avoid missing any doses.
- If you take too much XARELTO, go to the nearest hospital emergency room or call your doctor right away.

If you take XARELTO for:

- Atrial fibrillation that is not caused by a heart valve problem:
  - Take XARELTO 1 time a day with your evening meal.
  - If you miss a dose of XARELTO, take it as soon as you remember on the same day. Take your next dose at your regularly scheduled time.

- Blood clots in the veins of your legs or lungs:
  - Take XARELTO 1 or 2 times a day as prescribed by your doctor.
  - For the 10 mg dose, take XARELTO with or without food.
  - For the 15 mg and 20 mg doses, take XARELTO with food at the same time each day.
  - If you miss a dose:
    - **If you take the 15 mg dose of XARELTO 2 times a day (a total of 30 mg of XARELTO in 1 day):** Take XARELTO as soon as you remember on the same day. You may take 2 doses at the same time to make up for the missed dose. Take your next dose at your regularly scheduled time.
    - **If you take XARELTO 1 time a day:** Take XARELTO as soon as you remember on the same day. Take your next dose at your regularly scheduled time.

- Hip or knee replacement surgery:
  - Take XARELTO 1 time a day with or without food.
  - If you miss a dose of XARELTO, take it as soon as you remember on the same day. Take your next dose at your regularly scheduled time.

- Blood clots in people hospitalized for an acute illness:
  - Take XARELTO 1 time a day, with or without food, while you are in the hospital and after you are discharged as prescribed by your doctor.
  - If you miss a dose of XARELTO, take it as soon as you remember on the same day. Take your next dose at your regularly scheduled time.

- Reducing the risk of serious heart problems, heart attack and stroke in coronary artery disease:
  - Take XARELTO 2.5 mg 2 times a day with or without food.
  - If you miss a dose of XARELTO, take your next dose at your regularly scheduled time.
  - Take aspirin 75 to 100 mg once daily as instructed by your doctor.

- Reducing the risk of a sudden decrease in blood flow to the legs, major amputation, serious heart problems or stroke in people with peripheral artery disease including those who have recently had a procedure to improve blood flow to the legs:
  - Take XARELTO 2.5 mg 2 times a day with or without food.
  - If you miss a dose of XARELTO, take your next dose at your regularly scheduled time.
  - Take aspirin 75 mg to 100 mg 1 time a day as instructed by your doctor.
### How should I take XARELTO? (continued)

#### For children who take XARELTO:
- The dose of XARELTO depends on your child’s body weight and will be calculated by your child’s doctor. Your child’s doctor will tell you if XARELTO can be given to your child with or without food.
- The adult caregiver should give the dose.
- If your child is taking the tablet, the tablet should be taken whole and should not be split in an attempt to provide a lower dose of XARELTO.
- If your child is taking the oral suspension, use the syringes provided in the original carton. The suspension will be prepared by the pharmacy. See the Instructions for Use included in the carton on how to properly give a dose of XARELTO oral suspension to your child.
- Do not switch between the XARELTO oral suspension or tablet without first talking to your doctor.
- If your child vomits or spits up:
  - right after or within 30 minutes of taking the oral suspension, give a new full dose.
  - more than 30 minutes after taking the oral suspension, do not give the dose again. Give the next dose at the regularly scheduled time.
  - if vomiting or spitting up persists, contact your child’s doctor right away.
- If your child misses a dose:
  - If your child is taking XARELTO 1 time a day, give the dose as soon as you remember on the same day. If this is not possible, skip this dose and give the next dose at the regularly scheduled time.
  - If your child is taking XARELTO 2 times a day, give the missed morning dose as soon as you remember. You may give the missed morning dose together with the evening dose. However, a missed evening dose can only be taken in the same evening.
  - If your child is taking XARELTO 3 times a day, skip the missed dose and give the next dose at the regularly scheduled time.

### What are the possible side effects of XARELTO?

XARELTO may cause serious side effects:
- See “What is the most important information I should know about XARELTO?”

The most common side effect of XARELTO in adults was bleeding.

The most common side effects of XARELTO in children include:
- bleeding
- cough
- vomiting
- inflamed stomach and gut

Call your doctor for medical advice about side effects. You may report side effects to FDA at 1 800-FDA-1088.

### How should I store XARELTO?
- Store XARELTO tablets and suspension at room temperature between 68°F to 77°F (20°C to 25°C).
- Store syringes and bottle upright in the original carton for XARELTO suspension.
- Do not freeze XARELTO suspension.

Keep XARELTO and all medicines out of the reach of children.

Discard XARELTO suspension after “Discard after” date written on the bottle.

### General information about the safe and effective use of XARELTO.

Medicines are sometimes prescribed for purposes other than those listed in a Medication Guide. Do not use XARELTO for a condition for which it was not prescribed. Do not give XARELTO to other people, even if they have the same symptoms that you have. It may harm them. You can ask your pharmacist or doctor for information about XARELTO that is written for health professionals.
What are the ingredients in XARELTO?

Active ingredient: rivaroxaban

Inactive ingredients tablets:
croscarmellose sodium, hypromellose, lactose monohydrate, magnesium stearate, microcrystalline cellulose, and sodium lauryl sulfate.

The proprietary film coating mixture for XARELTO 2.5 mg tablets is Opadry® Light Yellow and contains: ferric oxide yellow, hypromellose, polyethylene glycol 3350, and titanium dioxide.

The proprietary film coating mixture for XARELTO 10 mg tablets is Opadry® Pink and contains: ferric oxide red, hypromellose, polyethylene glycol 3350, and titanium dioxide.

The proprietary film coating mixture for XARELTO 15 mg tablets is Opadry® Red and contains: ferric oxide red, hypromellose, polyethylene glycol 3350, and titanium dioxide.

The proprietary film coating mixture for XARELTO 20 mg tablets is Opadry® II Dark Red and contains: ferric oxide red, polyethylene glycol 3350, polyvinyl alcohol (partially hydrolyzed), talc, and titanium dioxide.

Inactive ingredients for oral suspension:
anhydrous citric acid, hypromellose, mannitol, microcrystalline cellulose and carboxymethylcellulose sodium, sodium benzoate, sucralose, sweet and creamy flavor, and xanthan gum.
